to change controls of such

Controls changer page

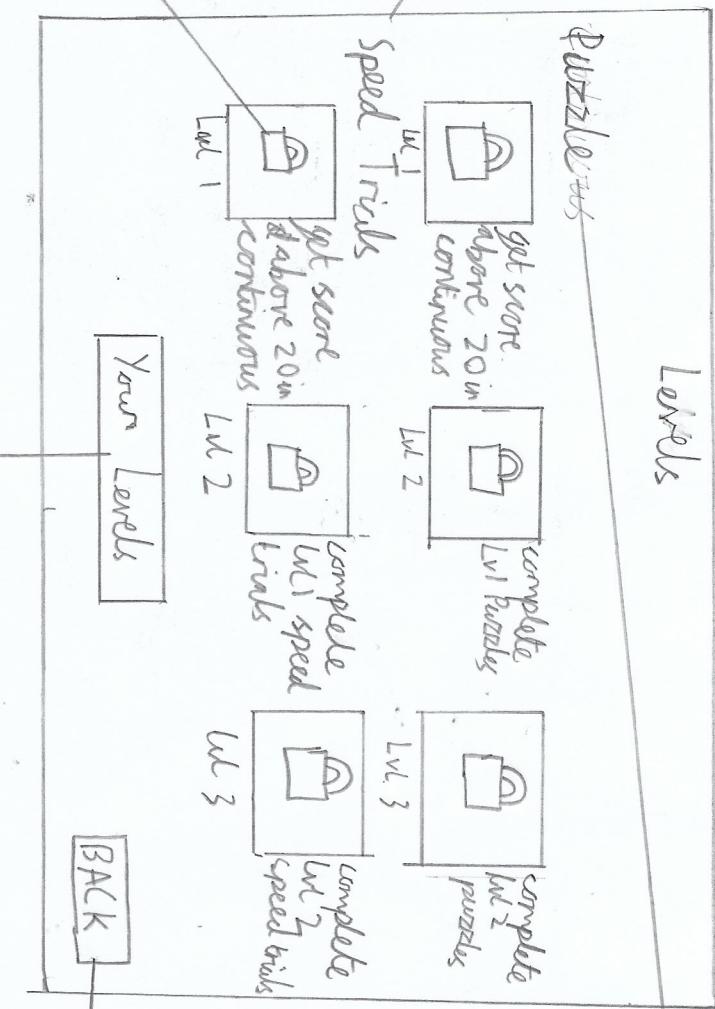

How changes works

Once one of the buttons we pressed, you are able to change that section's key by pressing the predefined key. Because In-Game and Level - Builder are two

In-Game	Controls
Following controls are set when you are playing game (playing level or continuing)	<input checked="" type="checkbox"/> [Space] turn <input checked="" type="checkbox"/> [P] Pause
Level Builder	<input checked="" type="checkbox"/> [K] create killer line <input checked="" type="checkbox"/> [B] create bouncy line <input checked="" type="checkbox"/> [C] create checkpoint

The following controls are set when you are creating/ editing a level

Levels Page

Type of game where player tries to find the ginch block

Back button

Once this button is pressed

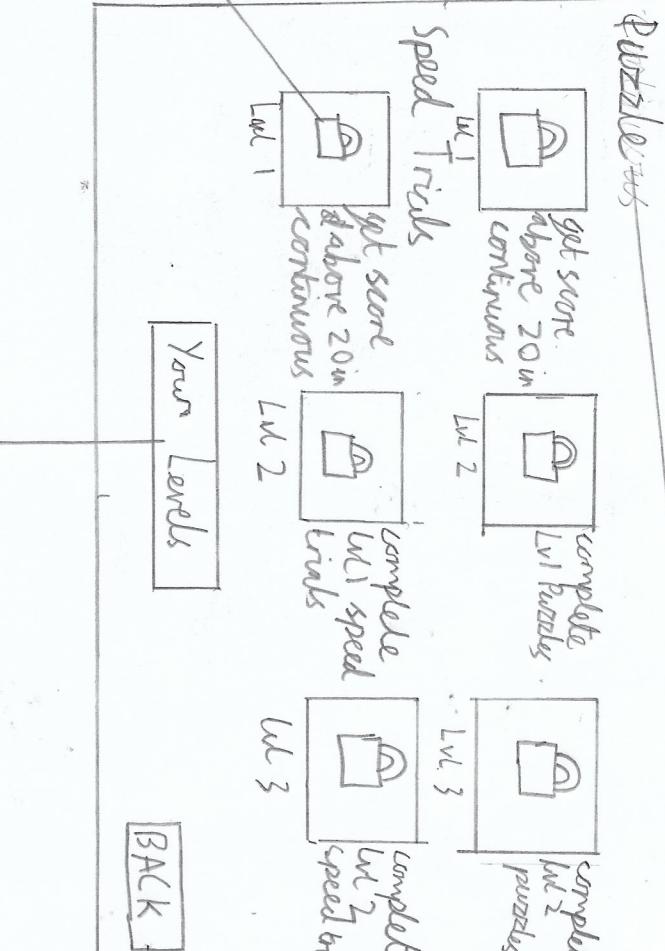

you will be taken back to the previous page which should always be the home page

Once this is clicked, you will be taken to a page where you will be able to select one of your finished games.

Your Levels

This means the level is locked and that you have to complete the task on the right to access Level

BACK
